

Who are We?

Dynamics Telephony is a subsidiary of CT Solutions (www.ct-solutions.com). Our parent company has provided robust, high availability enterprise communications solutions for over 25 years. The company provides services ranging from training and custom reporting, MIS and data analytics to turnkey fully integrated custom solutions for large contact centres.

Dynamics Telephony was setup to provide an intergrated telephony solution for MS Dynamics. This is the sole function for the company and as such it is able to focus entirely on this one product while still leveraging the telephony engines, techologies and experience gleaned from CT Solutions over the years.

Who are our Customers?

Our customers range from small businesses to large Contact Centers, and include many household name brands, national telecommunications companies, international banking corporations, the Irish police service and other government departments.

Computer Telephony Integration

for
